Indexing Sample Document

Indexing Sample Document

This document exists so that the PDF and DOCX parsers can be tested against a source whose text is already known. The .pdf and .docx beside it are generated from this file, so all three should extract to the same prose.

Why it matters

- Extraction must preserve heading text, not just body paragraphs.
- List items must stay separate lines rather than running together.
- Tables must survive as rows, even if the cell borders are lost.

Supported formats

Format	Parser	Notes
Markdown	LiteParse	the source of truth for this fixture
PDF	LiteParse	generated with pandoc
DOCX	LiteParse	generated with pandoc

A closing paragraph, so that the last section is not a bare table.
